

Burtonwood™

Generator & Switchgear Services

Bespoke Generator Sets

The Power of Experience

Bespoke Generators - Technical Specifications

In today's technology-dependent world, power is no longer a luxury but a necessity. That's why, for so many of Britain's big businesses and services, the power of our experience counts for so much.

With over 30 years history in the fields of diesel generator design, manufacture, installation, maintenance and repair, engine control systems and high and low voltage switchgear equipment, Burtonwood Generator & Switchgear Services is the only company that offer a full spectrum of supply and support – including planned and reactive maintenance - across the power generation field.

Burtonwood Generator & Switchgear Services offer professional consultancy and technical advice regarding any situation where constant power is required.

From standards sets to bespoke solutions, we offer our customers complete protection against electricity supply malfunctions.

Bespoke Generators

For customers with bespoke requirements, we offer a complete design and manufacture service of 250KW - 3MW generators.

Working from our purpose-built assembly unit in the North West of England, we can develop generators and control systems according to customers' own designs and specifications, with mains synchronisation by means of G59 compliant equipment, multiple generator set applications or "no brake" ASCO transfer systems. Additionally, Burtonwood can offer a full site survey and work to develop a design in part or full.

Installation

Having ordered a bespoke generator, our full installation service ensures complete continuity for customers. Carried out by our skilled engineers, we oversee the offload of machinery into position; conduct a thorough mechanical and electrical installation and fully test and commission the generator before handing it over to the customer with our comprehensive documentation package (O&M manuals containing all drawings, instructions and information).
